FOR FIRE TRUCKS

**CTD** GROUP

CTD Group has been moving forward for more than 30 years with the same requirement: to learn, master and perfect its experiences, skills and the quality of its products. The group has become a key player in the maintenance of green spaces through garden cultivation, spraying, watering and dosing. It is also recognized in the world of firefighting for its dosing, transfer and high pressure equipment. Fostering innovation and long-term vision, CTD Group

Fostering innovation and long-term vision, CTD Group is diversifying its activities and expanding its geographic reach from France to the international stage. CTD Group manages the activities of the companies CTD and YVMO. The head office is based in Guéreins, north of Lyons, FRANCE.

## 4 | PRINCIPLE AND BENEFITS

# PRINCIPLE OF OPERATION

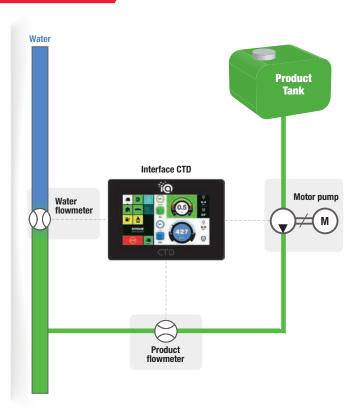

Positive pressure injection is the basis of our dosing systems which means that the product is injected at a higher pressure into the water.

For this, a motor pump dedicated to additive products is installed on the vehicle and is connected to the hydraulic and electrical system of the truck. The motor pump sucks the product from the tanks or from an external inlet and an automatic control allows the correct amount of product to be dosed into the water.

The use of electronics associated with various measurement sensors makes it possible to control the water flow rate/product concentration ratio precisely.

The on-board sensors convey the information to the system interface allowing the user to have real-time working information.

Concentration is selected by means of our simple and functional screens.

# **Benefits of our systems**

NO PRESSURE LOSS

The product injection is carried out by the motor pump without external elements to be installed on the water piping.

No pressure drop is therefore induced by the system, which makes it possible to stay away from the dangerous areas by allowing long hose lengths.

PRECISE DOSAGE

The accuracy is optimized by the use of sensors associated with our electronic interface which regulates the product injection pump.

PRODUCT SAVINGS

The dosage accuracy associated with the daily screen reports allows better control of the quantity of products used.

**QUICK COMMISSIONING** 

The on-vehicle system combined with our easy-to-use interface reduces setup time and produces instant foam at the branch.

VARIABLE FLOW RATES AND CONCENTRATIONS

Our systems measure the current water flow of the branch and regulate the concentration based on the user's choice on the screen. Operating ranges can be defined on our interface.

COMPATIBLE WITH CLASS A AND CLASS B PRODUCTS

The installed motor pump can inject products dedicated either to class A fires or class B fires.

AUTOMATED FLUSHING

The system flushes automatically at the end of the operation, thus limiting the risk of clogging associated with the products. The possibility of adding the automatic frost protection option optimizes the cycle.

ADDITIONAL FUNCTIONS

The use of a motor pump makes it possible to combine optional functions on the vehicle such as tank filling, products transferring,

FUNCTIONAL INTERFACE

Our screen show all the information essential to the user thus optimizing control of the intervention.

## SIMPLIFIED INTERFACE | 5

# THIS SIMPLE AND COMPACT BLACK AND WHITE DISPLAY IS THE INTERFACE OF OUR ELECTRICALLY-POWERED SINGLE-PRODUCT DOSING SYSTEMS.

It is used to regulate the dosage of a single class A or class B product by means of rapid use with a Start/Stop button. Other options such as tank filling or automatic flushing enhance this screen to optimize its use

#### **DOSING**

The screen manages the dosage regulation. A Start/Stop button activates the system quickly and easily. The regulated concentration can be modified using 2 + and - keys.

The tank filling can be managed by our screen using the pump of the dosing system to fill up the product tank at the end of the fire intervention.

# FUNCTION FLUSHING

The display provides an automatic fushing function after use. The pump sucks in water and sends it to the ground in order to flush the pipes, thus guaranteeing the lifespan of the equipment.

## INTERVENTION LOG BOOK

The screen records information related to interventions. The quantity of water and product used as well as the duration of the intervention are recorded in a listing accessible from the screen.

#### **CONFIGURABLE**

The screen integrates several setting configurations in order to adapt to the system quickly thus simplifying the commissioning at the fire vehicles OEMs.

## **BENEFITS**

- SIMPLE USE
- QUICK SETUP

- SMALL FOOTPRINT
- **ECONOMICAL**

## 6 I IQ CONNECTED INTERFACE

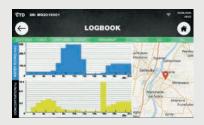

A TRUE REVOLUTION IN ELECTRONIC DOSING SYSTEMS, THIS COLOUR AND CONNECTED TOUCH SCREEN PROVIDES ALL THE INFORMATION NECESSARY FOR THE GOOD PERFORMANCE OF A FIRE INTERVENTION.

This dynamic interface makes it possible to regulate the dosage of up to 3 different products. Its many additional functions bring comfort to the user. New Wi-Fi and Sat-Nav technologies integrated into the screen ensure the device's connectivity and the traceability of fire interventions. The fully customizable screen display (colours, languages, keys, etc.) fully adapts to the working methods of firefighters around the world.

#### **LOG BOOK**

The screen records information related to interventions. The quantity of water and product used as well as the duration of the intervention are recorded in a report accessible from the screen. A detailed analysis is presented in the form of graphs ensuring traceability of the use of the product during the intervention. The system's Sat Nav records the location of the intervention thus completing the report. A fault log is also available.

#### **FILLING / TRANSFER**

The tank filling can be managed by our interface by using the pump of the dosing system to fill up the product tank at the end of the fire operation.

A transfer from the tank to the outlet can also be done through the screen in order to supply foam concentrate to another vehicle.

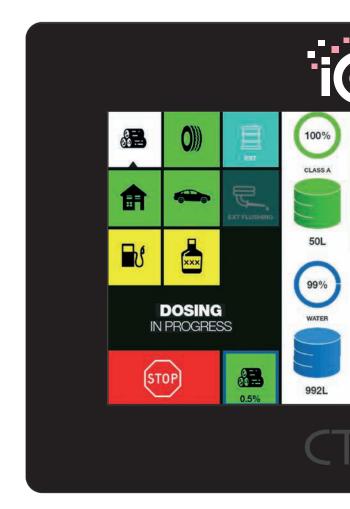

#### **EXERCISE MODE**

An exercise mode is accessible from the screen in order to use the system without using any product. User training is thus carried out while respecting the environment.

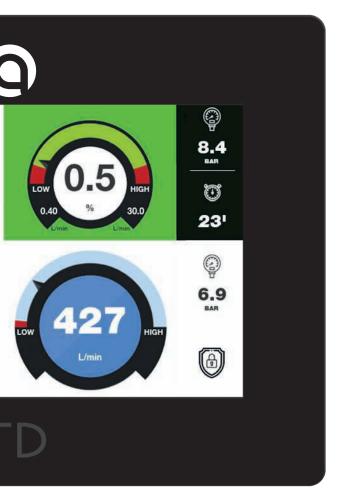

#### **DOSING**

The screen manages the dosage regulation. The system is put into operation by means of pre-programmed intervention keys. The dosage is controlled by automated priming, flushing and frost protection cycles. A stop button is used to end the intervention and to save the work information. A simplified display is also available on this screen.

#### **REMOTE TAKE-OVER**

Remote maintenance is available using the screen's wifi connection. An update or configuration can be carried out by CTD in order to maintain a functional and efficient system.

#### **SETTING**

The screen integrates several setting configurations in order to adapt to the system quickly thus simplifying the commissioning at the fire vehicles OEMs. Many screen display options are available so that the user can take ownership of their interface.

### **IQ BENEFITS**

- **CAPACITIVE TOUCH**
- **CUSTOMIZABLE**
- **WATERPROOF IP68**
- MULTILANGUAGES
- **WIFI COMPATIBLE**
- **INTEGRATED SAT NAV**
- **SHOCK AND WATER RESISTANT**

## 8 | ADDITIVES / FOAM CONCENTRATE

WATER HAS ALWAYS BEEN USED TO EXTINGUISH FIRES. SINCE THE 1960's, THE EARLY ADDITIVES HAVE BEEN INVENTED TO BE ADDED TO THE WATER TO INCREASE SIGNIFICANTLY ITS EXTINGUISHING POWER. THIS IS HOW FOAM APPEARED IN THE FIRE ENVIRONMENT.

As Class C D E F fires are rather extinguished with powders, Class A and Class B fires, on the other hand, can be extinguished by combining water and additives thus producing an extinguishing foam.

#### THE TYPES OF FIRE

Solid material fires (wood, tires, cars, house, etc.)

Hydrocarbon liquids (immiscible with water) and polar liquids (miscible with water)

Gas fire

Metal fire

Electrically generated fire

Fires related to cooking appliances

#### THE PRODUCTS

#### **Class A - WETTING / FOAMING ADDITIVE**

So-called wetting/foaming products have been developed to fight Class A fires.

These are products that combine different synthetic surfactants to reduce the surface tension of water. The latter being made more penetrating by the product will more easily reach the embers of burning materials and will prevent any resumption of the hearth.

The use of suitable nozzles generating an air supply to the water + product solution will produce a foam that will extinguish the flames on the surface.

These Newtonian products (low viscosity) are used at low concentrations between 0.1 and 1%.

#### **BENEFITS**

- NON VISCOUS
- LOW CONCENTRATION

QUICK EXTINGUISHING

- WATER SAVING **BIODEGRADABLE**
- **MULTI-EXPANSION**

Class В

#### **Class B - FOAM CONCENTRATE**

Also used in certain cases in Class A fires, a foam concentrate is mainly used for class B fires.

The liquid risk of the hydrocarbon type requires a so-called film-forming foam concentrate (AFFF: Aqueous Film Forming Foam) allowing the foam solution to create a film of water on the surface of the hydrocarbon. Extinguishing should be carried out with a direct, long-range stream. This foaming solution prevents the supply of oxygen to the burning liquid, stops the emission of flammable vapors and cools the surface with its constitution

The liquid risk of the polar solvent type requires a so-called polyvalent foam concentrate (AR: Alcohol Resistant) allowing to create a thicker protective film gel. Extinguishing should be carried out with an indirect jet in gentle application.

These pseudo-plastic products are used at concentrations

between 1 and 6%.

There are several kinds of foam products such as Proteinic, Fluorinated Synthetics, Fluoride-free Synthetics or Polyvalent. The viscosity of the products is very different depending on their composition.

* by default	120	180	240	360	600		
Pump flow range (1)	6 to 120 lpm	8 to 180 lpm	12 to 240 lpm	15 to 360 lpm	40 to 600 lpm		
Pump type			Piston		Gear		
Suction			-0.6 bar		-0.7 bar		
Pressure		16 bar					
Dosing range*			1 to 6%				
Water flow range*	4": 200 to	5,000 lpm	5": 300 to 8,000 lpm	6": 400 to	to 12,000 lpm		
Inlet/outlet manifold			On demand				
Motorisation			Thermal				
Product viscosity compatibility		< 400 Mpa.s <sup>(2)</sup> at 20°C					
Flushing	Automated						
Priming	Automated						

 $<sup>^{(1)}</sup>$  Other pump flow rate ranges available on request -  $^{(2)}$  At 375 s<sup>-1</sup> shear rate following the norm EN 1568-3:2018

#### **POSSIBLE OPTIONS**

Product tank filling

Product transfer

Product pumping

External suction hose

Tank level sensor

Floating battery charger

#### **FEATURES**

Standalone Skid

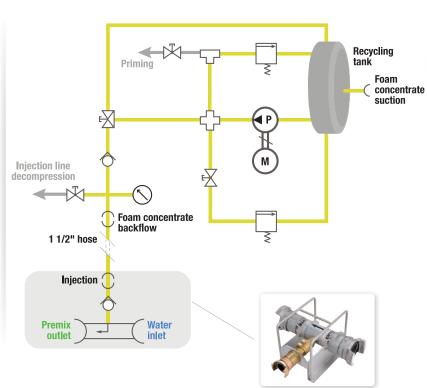

Class

	120	180	
Pump flow range	60 to 120 lpm	90 to 180 lpm	
Pump type	Piston	Piston	
Suction	-0.6 bar	-0.6 bar	
Pressure	16 bar	16 bar	
Dosing range	3 to 6%	3 to 6%	
Motorisation	Thermal	Thermal	
Product viscosity compatibility	< 220 Mpa.s <sup>(1)</sup> at 20°C	< 220 Mpa.s <sup>(1)</sup> at 20°C	
Priming	Manual	Manual	

 $<sup>^{\</sup>mbox{\tiny (1)}}$  At 375 s $^{\mbox{\tiny -1}}$  shear rate following the norm EN 1568-3:2018

#### **POSSIBLE OPTIONS**

External suction hose

Water line injector

Product transfer

Protective cover

Electric start

# 22 | FURCIFER

# 246 L/min 0.3%

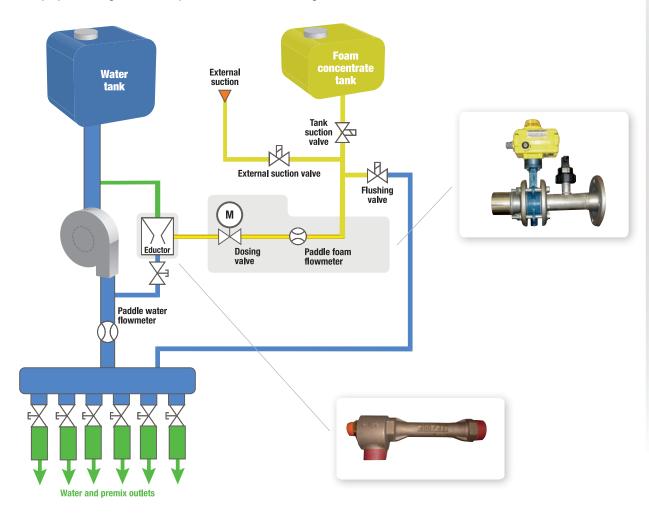

Water Pump < 20,000 lpm

#### **FEATURES**

* by default	120	180	240	360	600	
Foam concentrate flow range	12 to 120 lpm	18 to 180 lpm	24 to 240 lpm	36 to 360 lpm	60 to 600 lpm	
Suction	-0.2 bar					
Pressure	15 bar					
Dosing range*	1 to 6%					
Water flow range*	3": 80 to 3,000 lpm	4": 150 to 5,000 lpm	4": 150 to 5,000 lpm	5": 250 to 8,000 lpm	6": 350 to 10,000 lpm	
Product viscosity compatibility	< 120 Mpa.s <sup>(2)</sup> at 20°C					

 $<sup>^{(1)}</sup>$  Other pump flow rate ranges available on request -  $^{(2)}$  At 375 s $^{-1}$  shear rate following the norm EN 1568-3:2018

#### **POSSIBLE OPTIONS**

Additional screen

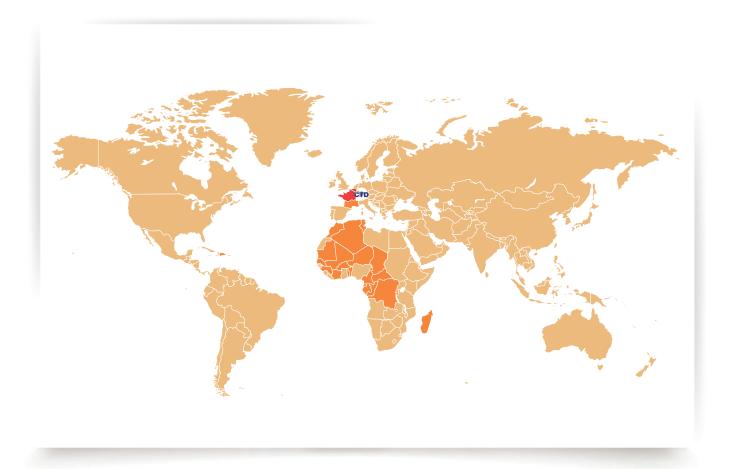

External suction hose

Pneumatic suction valve
